GLASS DIVIDERS

SELECT YOUR PANEL FRAME

T-LINE 34

3/4" stile width

The epitome of simplicity is represented with the sleek and simple T-Line 34 frame which offers a slender outline to your glass panel with just enough of a lip to grip for positioning.

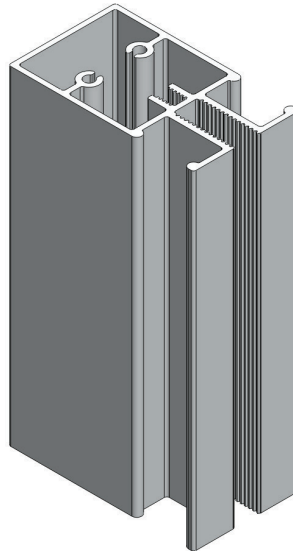

Named for its simple shape, the T-Line 34 panel frames are offered as the basic option for all panel construction.

SYSTEM 214

2-1/4" stile width

The System 214 with a thicker construction and inset finger grip offers a bold visual design statement while maintaining a clean aesthetic. The extra strength and proportions compliment and facilitate large panels for large spaces.

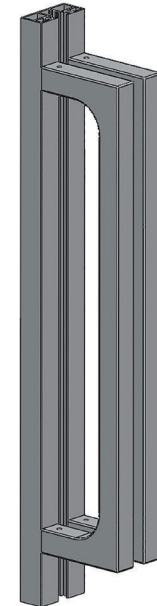

Due to its thicker 2-1/4" construction, System 214 is a good option for larger openings where panel rigidity is crucial.

MODERNO 58

5/8" stile width

The newest minimal stile frame with D-pull offers form and function blended together to make a statement. The modern D-pull allows for ease of positioning sliders and beautifully punctuates panels with its elongated D shape.

Moderno 58 offers a combination of strength and functionality with its integrated D shaped pull.

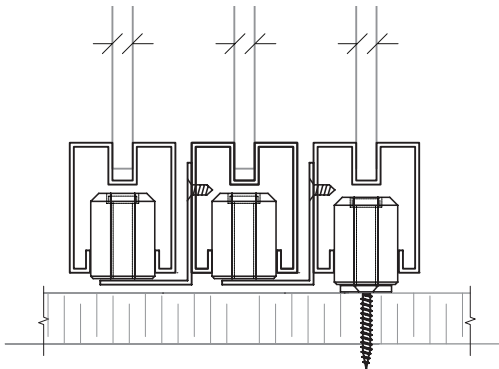

CHOOSE YOUR TRACKING SYSTEM

MONACO

trackless bottom sliders

Elegantly and minimally designed to inspire your creative mind, Monaco is our most popular tracking option. The Monaco offers many unique and stylish ways to divide a room or create a closet that fits your decor without floor tracking. Select from 3 frames, 2 finishes, and multiple insert options. Tracks can be fastened vertically or horizontally in one, two or three panel configurations.

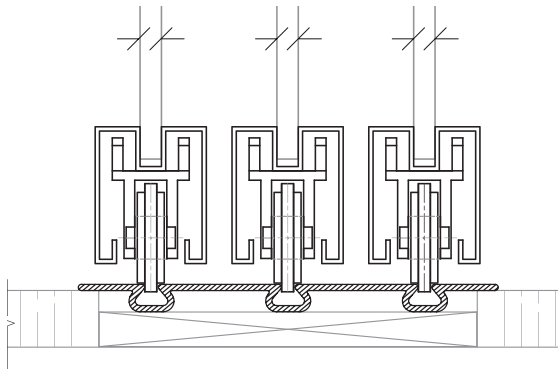

SAVONA

bottom rolling sliders

Savona is our most versatile tracking option. The Savona accommodates wider, taller openings in vertically mounted tracking. The floor track can be installed on any solid floor surface or flush mounted for a more seamless appearance. The floor track adds extra support and stability for larger panels.

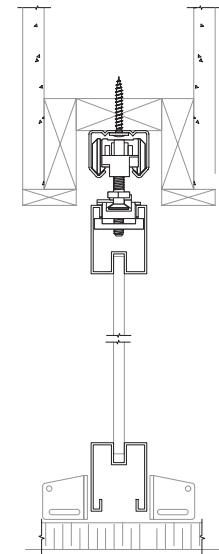

PORTOFINO

pocket door sliders

Portofino is used in new or existing pocket door applications. The Portofino uses a hanging system that allows you to apply the dividers without having to use a floor track.

Riviera is the ultimate choice for interior sliding doors. The flexibility of panel inserts and reversible panels combine to allow you total design creativity.

Slider Construction

- 6 mm panel insert gap allows many options. Select clear or white light diffusing safety glass, mirror panels, wood panels... the choice is yours. You can even combine two unique inserts for a different look on each side, since panels are reversible.
- With hidden rollers, panels are finished on both sides. Use as room dividers, pocket doors or closet doors or create complete rooms with 90° corner units.
- Optional top hung or top and bottom track systems guide the panels smoothly and quietly within the framed opening. They can be integrated over the wall or in-wall pockets.

Frame Options

System 214 frames with mitred 45° stiles can be used for seamless corner units. System 214 with its wider 2-1/4" thick stile can also accommodate optional locks. Clear anodized or black anodized finishes are available for all panel frame stiles.

Environmental

For a material or product to be considered green, it should have low impact on the environment and therefore be manufactured using practices which protect and conserve the environment and its natural resources. Aluminum and Glass are both such materials.
